

Terms and Conditions of Use of the E45 Patient Tester Service

- Applicants must be UK registered healthcare professionals in order to receive patient tester packs from the E45 range. You must declare your General Medical Council or Nursing and Midwifery Council registration number in order to partake in our service. All details given at point of registration will be validated via authenticity checks before registration can be completed.
- If there is more than one healthcare professional ordering patient tester packs from your hospital/practice, we may request that the packaging and delivery of these orders be combined. This is to enable us to continue to provide healthcare professionals with the patient tester packs they need by minimising costs and achieving greater efficiency.
- In the majority of hospitals, it is hospital policy that all medical tester packs should be dispensed and sent via the hospital pharmacy. Please ensure that your hospital is aware of the sampling arrangement.

We will send our tester packs to your hospital pharmacy for your attention. If however you wish to stipulate an alternative delivery address, it is your responsibility to negotiate and authorise this within your hospital.

- Information provided at point of registration will be used to provide and personalise our service to you. We would like to be able to contact you in the future to obtain your views on how we can improve our service to you and provide relevant information on all of our brands. Please indicate at point of registration if you do not wish us to do so. Please note however that, in some instances, it may be necessary for us to communicate with you in any event for the administrative or operational reasons relating to our service.
- This patient tester service is only available in the United Kingdom.
